Mould in the wood.

East Wall, cleaned up with a broom (one of the ladies), black spot disappear.

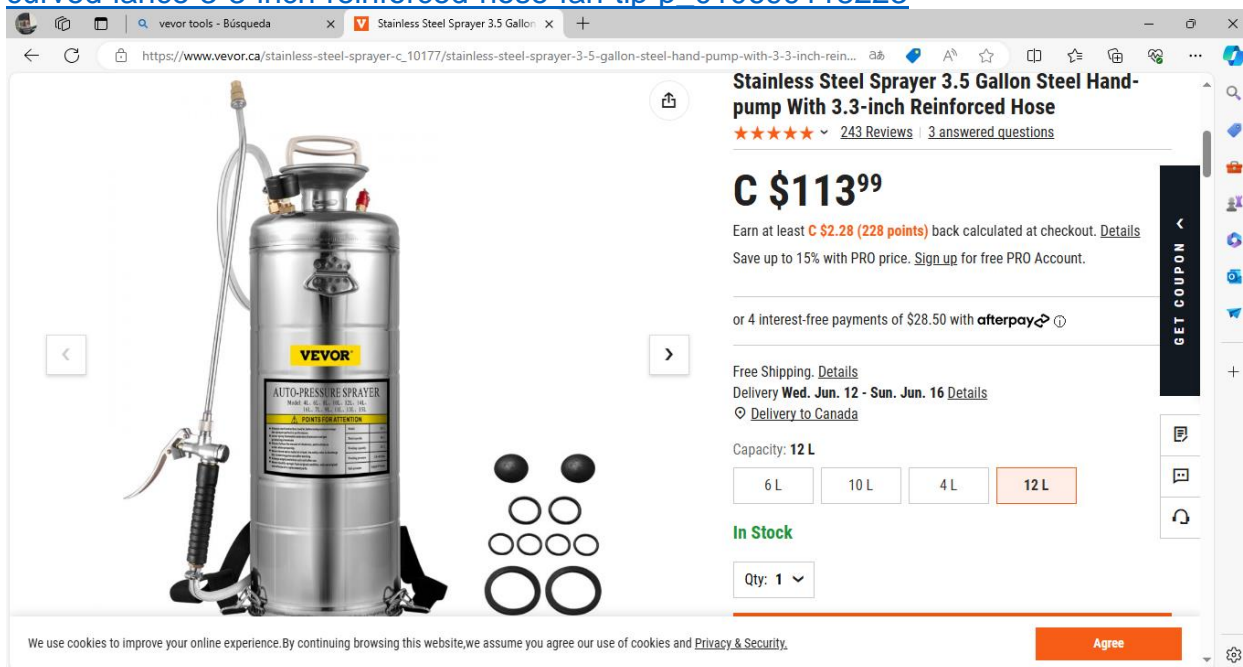

## CONCLUSIONS & RECOMMENDATIONS:

1. The seepage on the west wall is still on. Rob agreed with this action.
2. The floor must be kept dry on the west wall, all the time.
3. Rob asked for the cost of remediation.

We are not a contractor, but a supplier. I said the retailer product cost is 40 CAD/bottle, 10 CAD/liter. This house completed today 3 applications with 6 bottles per floor, each application. Total 18 bottles per floor, 36 bottles per house, or 9 boxes. Total 1,440 CAD. Assuming 4 hours per application at 30 CAD/h = 360 CAD. Grand Total = 1,800 CAD. This house was in bad shape. I expect the most probable with 2 applications will be sufficient. So,  $12 \times 2 = 24$  bottles,  $4 \times 2 = 8$ h. Total cost should be  $960 + 240 = 1,200$  CAD.

The sprayer can be bought for 115 CAD

4. The smell has decreased considerably. Basement 3, First floor 1, scale 1 to 10.
